RE: Docket 17-84 and 17-79

I strongly oppose!

First, the window for comment is exceedingly short and not in line with the standard 60-90 day window typically allowed for public comment.

Secondly, local governments and municipalities should NEVER, EVER be restricted or lose their right to choose and or decide along with having the means to adequately assess the implications on any infrastructure changes, especially 5G, be it cost, health and other feasibility concerns.

5G technology requires rigorous, independent of industry health impact research before any suggested implementation would ever be considered. And there is already plenty out there. And it is NOT good.

I strongly oppose
